WALL AND FENCE INSTALLATIONS I-Shaped posts are set into 18" to 24" diameter holes, 30"-42" deep, the posts are drilled 5' or 8' on center depending on the type of wall. The posts are then aligned, leveled and anchored in a concrete footing. The panels are then inserted between the I-Shaped posts. The bottom panel is supported by the footing around each post. The additional panels interlock and stack. The fence is then completed, once the cap rail is installed.

SPECIFICATIONS 1. Posts, panels and rails have equal texture on both sides, 2. Concrete is thoroughly mixed and vibrated and shall attain a strength of 4,000 PSI at 28 days, 3. Steel mesh reinforced panels and rebar reinforced post. (see other side for illustrations)

SECURITY

ABOUT US Wall Way USA has been adding value and warmth to homes, planned communities and municipal for over 18 years. We offer a wide array of products to meet a variety of our clients needs. From solid wall panels for special applications to multiple systems and appearances for design flexibility. Wall Way USA offers superior design and professional construction crews to deliver the best possible building solutions. Our ultimate goal is to provide you, the client, with limitless design possibilities and positioning ourselves to meet your needs.

OUR PRODUCT Constructed with panels and steel reinforced systems, Wall Way USA builds walls designed for maximum strength and minimum maintenance. Our sophisticated double-sided design will compliment any environment while withstanding hurricane force winds. All of our walls meet the state of Florida's building codes. To complete the aesthetics, the panels tongue and groove systems provide a superior finishing touch.
